

Is Leaving Masonry Unprotected From Water A Good Idea?

Masonry Absorbs Water and Causes These Common Problems

Cracking

How long until freeze damage causes a hidden crack to leak?

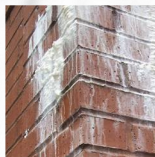

Spalling

When do bricks need replacing due to flaking and chipping?

Brittle Mortar

How much water can mortar absorb before it crumbles?

Efflorescence

How much does building bloom de-value a property?

Mold

When will hidden mold and mildew require expensive remediation?

Keeping water out since 1989!

Does The PWS Difference Matter To You?

Superior To Silane/Siloxane

PWS works where silane/siloxane can't, even on split-face block, fluted block, wood, and all stone.

Lasts Longer

PWS provides better resistance to UV light and remains flexible in all temperatures.

Protects Better

Our RTV silicone rubber technology fills pores better and provides more protection against wind driven rain.

Bridges hairline cracks

PWS elongates and bridges hairline cracks.

Invisible Protection

PWS penetrates and dries clear, flat, and invisible.

Breathable

PWS keeps water out but lets vapor pass.

Protects Against Graffiti

PWS can provide non-sacrificial graffiti protection.

Easy Application

Spray, brush, or roll-on in a flood coat to apply.

Works on brick, block, concrete, stone, stucco, wood, and other porous material.
